

## MicroDataLogger® Technical Bulletin

---

**DATE:** June 21, 2010  
**SUBJECT:** Windows 7 Operation, DataManager Development Status

No future updates to the DataManager software for seamless operation on Windows 7 or future Windows operating systems are planned. However, a workaround for Windows 7 machines is to switch to "Windows XP Mode," which is possible if you have the "Ultimate" or "Professional" versions of Windows 7.

If you don't have one of these versions of Windows 7, then you'll need to download the XP Mode software from <http://www.microsoft.com/windows/virtual-pc/default.aspx> \* and install it on your Windows 7 machine.
